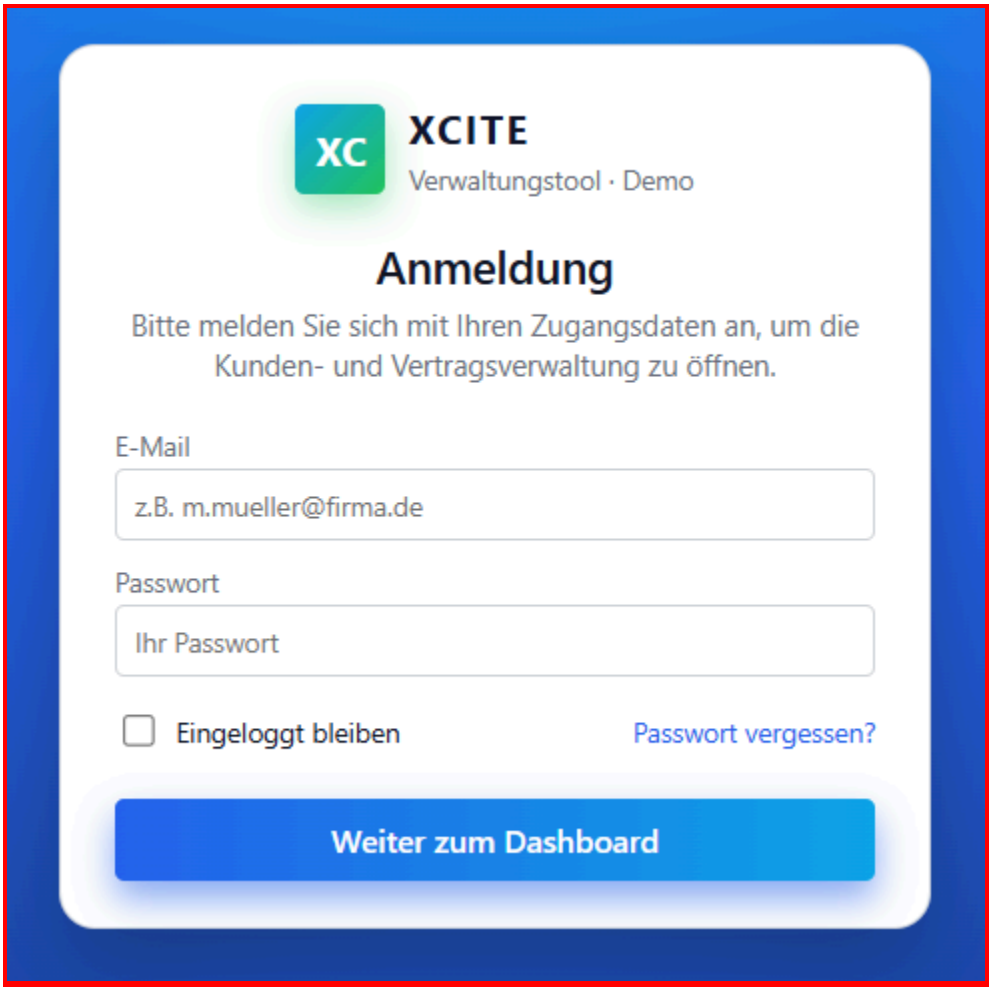
All working functions - Doc V.1.1

1. EB (Initial Requirement) → Functionality defined in the initial requirements (DOC)
2. CR (Change Request) → Functionality added during the project
3. BL (Backlog) → Functionality planned for a future version (V2)

Login Page work



- **Page Path:** /login.html
- **What this page is for:**
  - Lets users sign in to the system.
  - Validates credentials against the backend API.
  - Redirects authenticated users to the customer area (/pages/customers/).
- **Main functions:**
  - E-Mail and password fields: Required inputs for authentication.

    - Login button: Sends credentials to the API and starts the session.
    - Error message box: Shows login errors (e.g., wrong credentials).

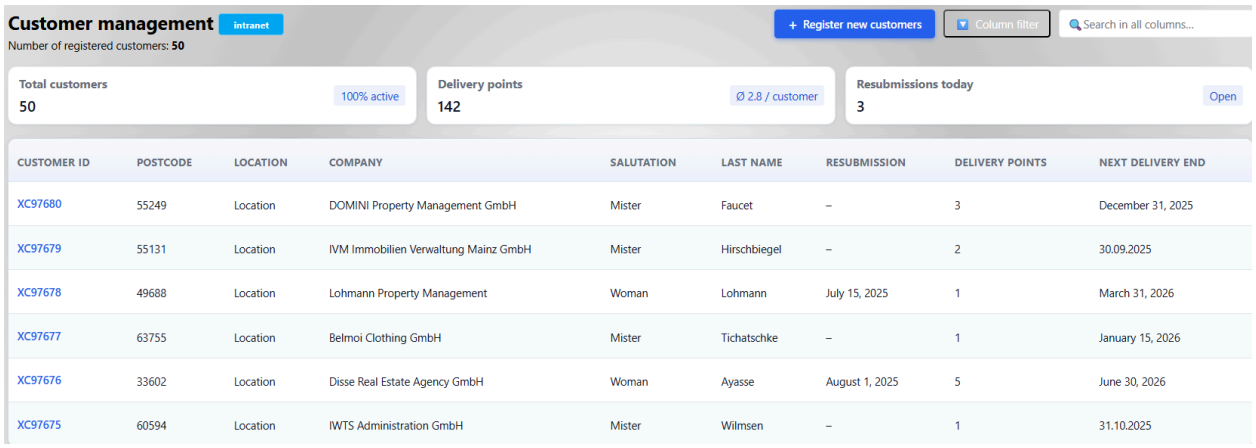
Technical Login Flow

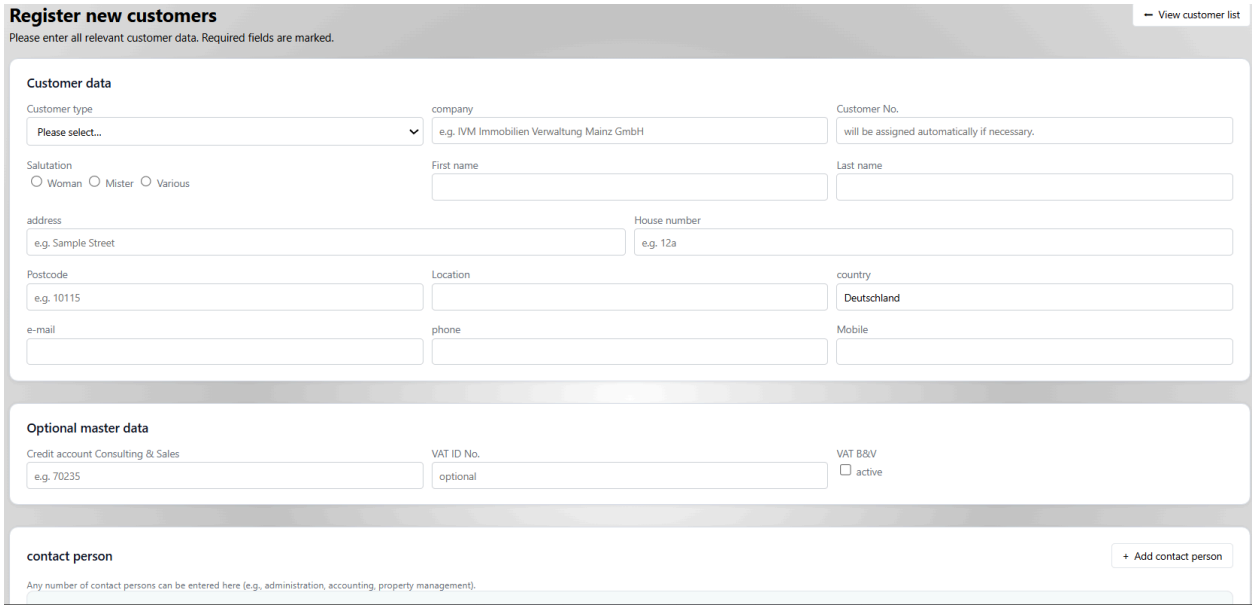
1. User opens /login.html
2. If a token already exists, the user is redirected to /pages/customers/
3. User submits email and password.
4. Frontend calls POST /api/auth/login
5. On success, token (xdive_auth_token) and user data (xdive_user_data) are stored in localStorage
6. User is redirected to /pages/customers/
7. On error, a message is displayed

Session Behavior After Login

- **Token key:** xdive_auth_token
- **User key:** xdive_user_data
- **Storage type:** localStorage
- **Validation:** Protected pages validate the session through auth.js
  .
- **Logout / btn Logout:** Invalid/expired token leads to a logout redirect to /login

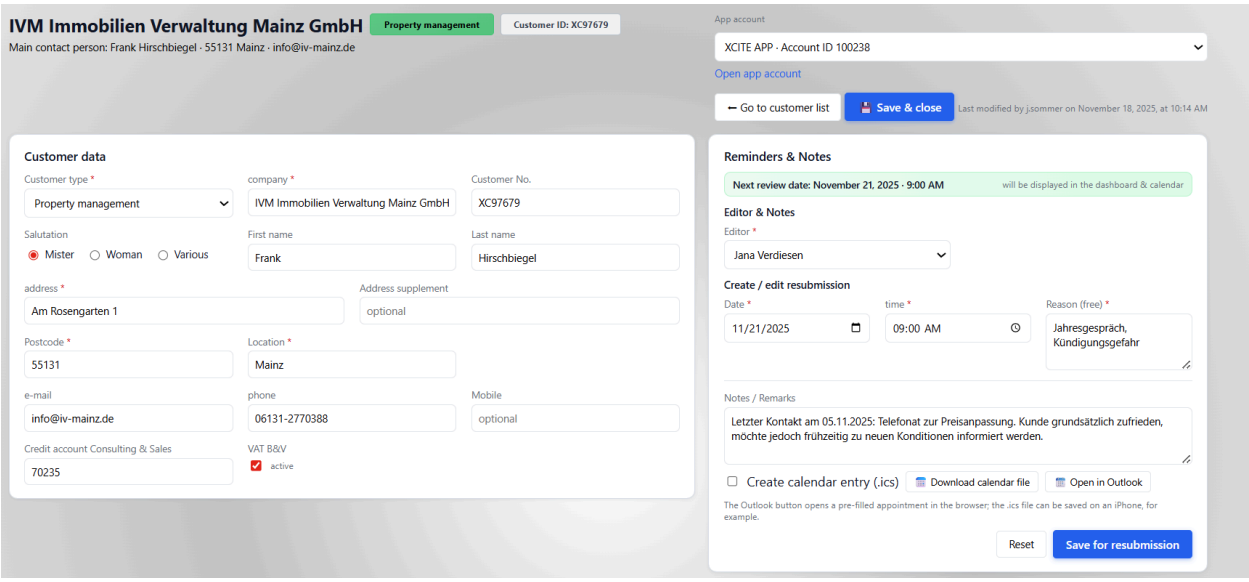
Customer List Page / Added new customer: work

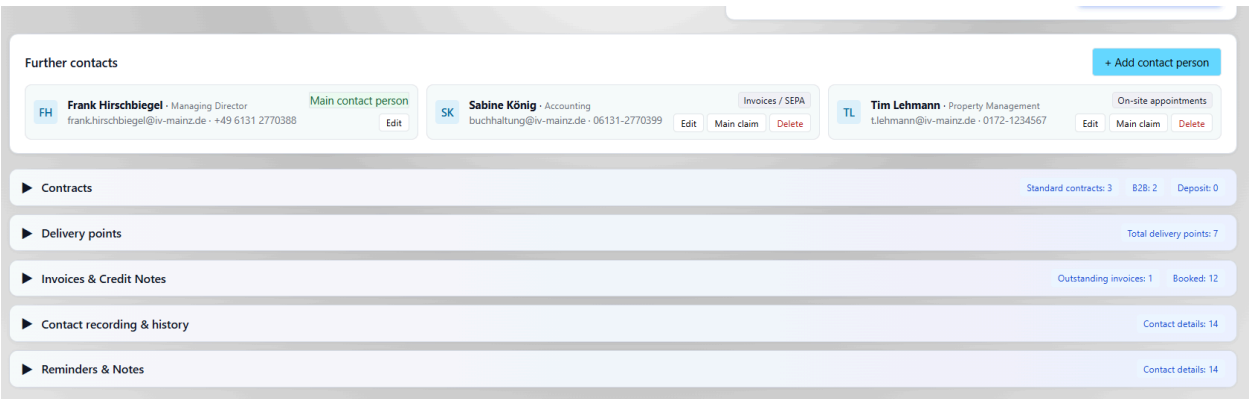




- **Path:** /pages/customers/ **work**
- **What it's for:** Shows all customers
- **Main functions:**
  - New customer button
  - Global search
  - Column filters
  - Sort columns
  - Open customer details (Click customer ID, e.g., XC200)
- **Dashboard cards on top:**
  - Total customers
  - Total delivery points
  - Average delivery points per customer
  - Open reminders for today

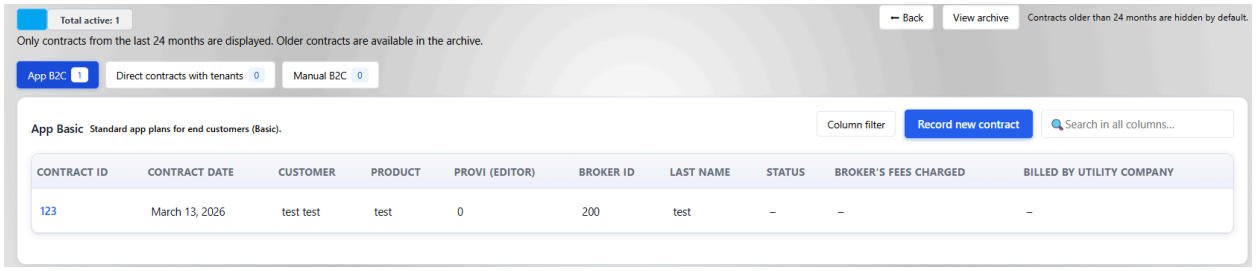
Customer Details Page:

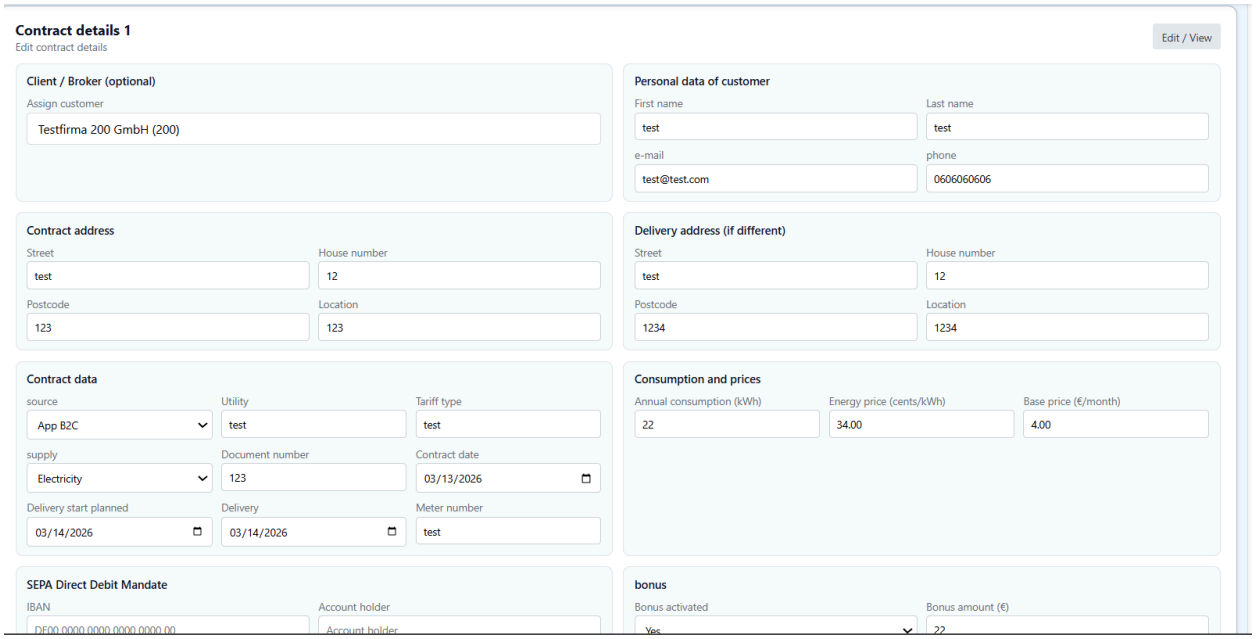




- **Path:** /pages/customers/detailsCustomers/?id=2000 **work**
- **What it's for:** Shows all information for one customer
- **Main sections and functions:**
  - **A) Customer master data:** Edit customer fields (name, address, contact, account data, status, etc.), Save button updates record.
  - **B) Contracts:** Shows Standard and B2B contracts, with search, sort, filters, and quick overview of counts/dates.
  - **C) Delivery points:** Shows all linked delivery points, includes form to add new delivery point, with search, sorting, and filters.
  - **D) Invoices and credit notes (Core):** Shows open and create new invoice, Invoice list supports search, sorting, and filters, Summary table shows booked amounts per contract. Split one invoice amount across multiple contracts (Validation ensures split total matches invoice total).
  - **E) Contacts and history:** Create contact notes and shows contact history timeline.
  - **F) Reminders and notes (Core):** Create and manage reminders, Mark reminders done or open, Edit and delete reminders

B2C List Page / Added new B2C / Edit B2C : work





- **Page Path:** /pages/b2c/ **work**
- **What it's for:** Manage all B2C contracts in one place.
